Profile

Computer Science student (BS result awaited) and full-stack, mobile, and automation developer with hands-on e-commerce operations experience as an Amazon Account Manager (FBM). Builds practical software – websites, Flutter and Firebase mobile apps, and Python automation tools – while understanding the business side of orders, customers, pricing, and service quality. Reliable team leader and clear communicator who picks up new tools quickly.

Work Experience

Account Manager 2023 – Present
E-Com Whizz

- Lead and mentor a team to achieve operational goals in a collaborative work environment.
- Manage order placement and tracking for Amazon FBM, ensuring timely, accurate fulfillment and resolving shipment delays and discrepancies.
- Respond promptly to customer inquiries and feedback, using insights to improve product offerings and service quality.
- Develop and maintain shipping templates that streamline logistics and keep listings compliant with Amazon policies.
- Analyze sales data and performance metrics to optimize accounts and grow revenue.

Customer Care Representative 2022 – 2023
MSS Logistic

- Provided friendly, efficient support across multiple channels, resolving inquiries and issues to ensure a positive customer experience.
- Communicated clearly in writing and verbally, maintaining a professional manner in every interaction.

Educator 2021 – 2022

- Built an engaging learning environment using varied teaching methods to suit different learning styles.
- Designed lesson plans and assessments aligned with educational standards and promoted critical thinking.

Technical Projects

OrbitINQ AI – Inquiry & Order Automation In Development
Private repository (available to discuss on request)

- Building a **Node.js** platform that brings WhatsApp Cloud API, Gmail, and web-form inquiries into one automated pipeline, replying to price and stock questions instantly from a company knowledge base.
- Designing an automated order-booking flow with customizable message templates, and payment-proof checks (account title, amount, and a 48-hour freshness window) with Cash on Delivery handled separately.
- Structured as a multi-tenant monorepo: Express API, **Next.js** dashboard, BullMQ background workers, and a **PostgreSQL** database via Prisma. Includes a setup wizard with a live AI simulator, order tracking, lead stages, and follow-up reminders.

Technical Projects (continued)

Amazon Repricer – Pricing Automation Engine Personal Project

- Built a **Python** bot that reads a Google Sheets worklist, collects Amazon Business pricing and quantity-break data, and uses sheet formulas to judge profitability (ROI) before deciding a price action.
- Automated verified price updates in Amazon Seller Central with **Selenium** and custom Chrome extensions, protected by a dry-run mode, audit logging, and a save-and-read-back check before any live change.
- Wrote unit tests and designed the tool so a failed step never advances a run, keeping seller accounts safe.

Amazon Repricer – Desktop App & Website Personal Project

- Packaged the engine as a Windows desktop application with **Electron**, so customers can run it without installing Python or receiving the source code.
- Designed a 15-screen setup and monitoring interface covering Google Sheets, Amazon Business and Seller Central setup, live run monitoring, run history, and diagnostics.
- Built and deployed the product's marketing and checkout website (HTML/CSS/JavaScript, Vite) with **Paddle** billing across subscription tiers, plus pricing, support, and legal pages.
- View Repository on GitHub | View Live Website

Travel Wise – Tourism Planning Mobile App Final Year Project

- Co-developed a cross-platform tourism planning app with **Flutter** and **Firebase** in a two-person team, covering authentication, real-time data, and location-based features.
- Debugged issues end to end, separating backend or database failures from device and network problems.

Personal Portfolio Website Personal Project

- Designed, built, and deployed a responsive portfolio site (HTML/CSS/JavaScript) hosted on Netlify.
- View Repository on GitHub | View Live Website
